HOW TO INSTALL DAPHNE MAE PRESETS

These install instructions allow you to do everything from you smartphone without having to use a computer. If you prefer to unzip your files from your computer, you will need to transfer the 4 individual .dng files to your smartphone using AirDrop, Dropbox, Google Drive or by emailing them to yourself. Once you have transferred the files and located them on your smartphone, you can skip to step 6 below to add them to the lightroom mobile app.

WHAT YOU'LL NEED: your smartphone | adobe lightroom mobile app | iZip mobile app

1. If you don't already have both the lightroom mobile app and iZip mobile app installed on your smartphone, you will need to download them from the App Store or Google Play Store.

2. Once both apps are installed, open your email to retrieve your Daphne Mae Presets order summary and downloads.

3. Under Downloads, click on **mobile presets**. It will open a web browser with a preview of the **daphne-mae-presets.zip file**. Note: The zip file is quite large, so be sure to give it a couple minutes to load. You may see just a blank screen at first.

4. It should say **Open in "iZip"**, otherwise select **More...** and scroll through the apps to right until you find **Copy to iZip**.

5. If it asks **Would you like to unzip all files?**, select **Ok**.

6. You will now see the 4 individual .dng files. Click on the first .dng file and select **Open In**. Scroll through the apps to the right until you find **Copy to Lightroom CC**.

7. Repeat step 6 until all 4 .dng files are added to the lightroom mobile app.

8. Select 1 of the .dng images and click on the 3 dots in upper right corner.

9. Select **Create Preset**. Enter the Preset Name and select the check mark in the upper right corner. Your 1st preset has now been created.

10. Repeat steps 8 and 9 until all 4 presets have been added.

11. You are now ready to apply your Daphne Mae Presets to all your favorite images!
